Identity and Self-Concept Theory in Psychology vs. Self-Concept in Sociology. Both psychology and sociology share an interest in self-concept, but they use slightly different ways to explore it. Individual researchers vary, of course, but generally, the divide can be thought of in these terms. SCC and SCD are hot topics in psychology since they influence thought patterns and behavior. Higher SCC indicates a firmer and more stable self-concept, while low SCC indicates that an individual is unclear or vague about who they really are. Self-concept develops and changes throughout the lifespan, but it is most in flux during the early years. Early childhood is a ripe time for young humans to perceive themselves in the world.
