Reproductive Endocrinology, Surgery, And Technology

E. Y Adashi; John A Rock; Zev Rosenwaks

At our division of Gynecological Endocrinology and Reproductive Medicine, we provide state-of-the-art diagnosis and treatment for all infertile couples. We offer the whole range of modern reproductive therapies like in vitro fertilization (IVF), intracytoplasmatic sperm injection (ICSI) and testicular sperm-Injection (TESE-ICSI) with excellent pregnancy rates. Together with the Centrum für Gynäkologische Endokrinologie und Reproduktionsmedizin Freiburg (CERF) we also work in the field of preimplantation genetic diagnosis. We provide expert counselling in the field of fertility preservation, gynaecology, fertility preservation, gynaecology.

Laparoscopic surgery has revolutionized the concept of minimally invasive surgery in the last decades but it presents limitations due to the normal... Reproductive outcomes appear similar to alternative approaches. Drawbacks of robotic surgery include longer operating room times, the need for specialized training, and increased cost. Robotic technology is nothing more than an enhancement along the continuum of laparoscopic technological advances and represents only the beginning of numerous more forthcoming advances. It constitutes a major improvement in the efficiency, accuracy, ease, and comfort associated with the performance of laparoscopic operations.
