A Guide To Nature In Winter: Northeast And North Central North America

Donald W Stokes

The four cardinal directions, or cardinal points, are the directions north, east, south, and west, commonly denoted by their initials N, E, S, and W. East and west are perpendicular (at right angles) to north and south, with east being in the clockwise direction of rotation from north and west being directly opposite east. Points between the cardinal directions form the points of the compass.
This is definitely a book to throw into your pack, if you're curious about the unseen wild mammals keeping you company in the great outdoors. I love its lightweight but data-packed pages, and rely on its careful discussion of behavioral clues, gaits and footprint sizes. There's even a chapter on scatology (the study of droppings)! What's not to love?
