Heaven and Earth: Global Warming: The Missing Science

by Ian Plimer

Heaven and Earth engagingly and comprehensively synthesizes what we know—or think we know—about the sun, earth, ice, water, and air. Heaven and Earth is a powerful argument against many of the punitive--and expensive--laws that are now being passed to 'protect' our environment--Sources other than Library of Congress. This book is one of the most misleading and grossly fraudulent books on the topic of climate change and global warming. Ian has a book filled with contradictions, claims that are unsupported with references, referencing that is deceptive or fraudulent, and some flat out lies (solid iron core of the sun, seriously!?). It is hard to take a non-fiction book seriously when it contradicts itself so many times. Request PDF on ResearchGate | On Nov 1, 2009, Paul R C Goard and others published 'Heaven and Earth—Global Warming: The Missing Science'.

Climate changes are cyclical and are driven by the Earth's position in the galaxy, the sun, wobbles in the Earth's orbit, ocean currents, and plate tectonics. In previous times, atmospheric carbon dioxide was far higher than at present but did not drive climate change. No runaway greenhouse effect or acid oceans occurred during times of excessively high carbon dioxide. During past glaciations, carbon dioxide was higher than it is today. The non-scientific popular political view is that humans change climate. Do we have reason for concern about possible human-induced climate change? T
